

MDM with Bizagi

Optimizing your Master Data Management

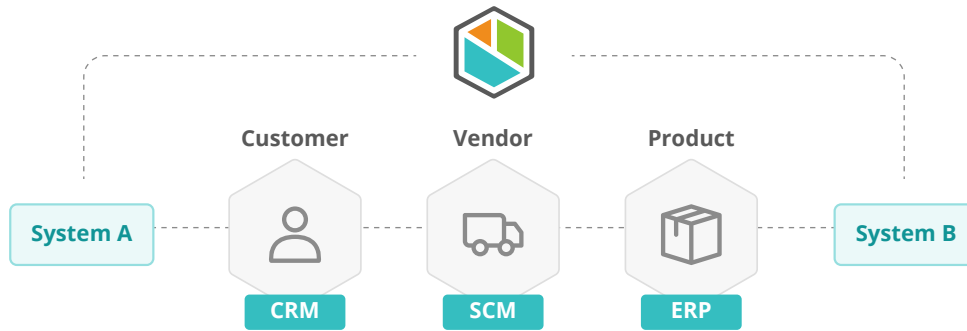

Automated real-time data updates for a single source of truth

Disparate systems and multiple data sources can lead to data duplications or inaccuracies that could be detrimental to operations. Business-critical data must be kept in sync and maintained while providing full visibility of accurate records for all internal and external stakeholders.

Maximizing MDM with Bizagi

MDM solutions ensure a single source of truth for your customer, product, and vendor data. Bizagi can enforce this data governance and quality management across your enterprise.

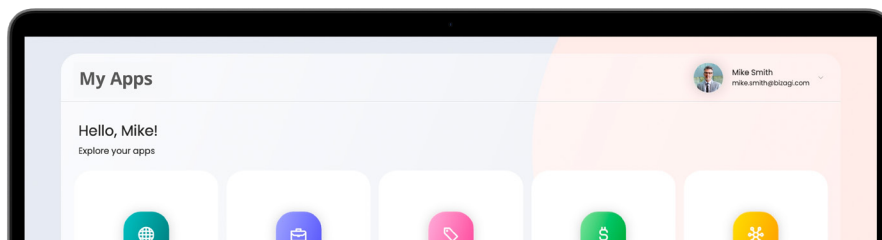

Our low-code platform allows you to wrap and extend your systems of record while providing a single source of truth and present data to users in a logical and digestible way.

Bizagi enables you to build and manage your master data processes, end-to-end. Use the low-code platform to build the process, assign business rules, integrate with data sources and apps, automate actions and orchestrate the movement of data across your enterprise.

Acting as a single source of truth, Bizagi integrates with all major applications, including, but not limited to, SAP, Salesforce, Oracle and QAD to manage and display data through one app, with customized views and permission for different business users.

of Record

Benefits of using Bizagi for MDM

Ensure compliance:

Manage data in a way that meets both internal and external standards and regulations to protect your organization from risk.

Enforce governance:

Ensure information is safely stored and managed with access based on persona roles and permissions.

Enable agility:

A single source of data makes it easier to adapt business processes in response to regulatory or market changes.

Aid decision-making:

Seeing a single source of truth helps provide accurate data insights and make informed business decisions.

Operational efficiency:

Help employees save time and save your business money with accurate data.

Supply Chain Efficiency

MDM ensures a seamless supply chain by removing data silos and improving data quality from supply to delivery.

- Synchronize data across the supply chain.
- Reliable data for inventory management.
- Improved collaboration & supplier relationships.
- Cost savings from promotions and volume pricing.

Better Customer Service

MDM can help you better serve customers by having a single, accurate view of all relevant information ready to reference.

- Quick issue resolution.
- Enhanced personalization.
- Ensure compliance and data protection.
- Targeted marketing.

MDM made easy with Bizagi

Bizagi's low-code platform orchestrates data sources to provide a single source of truth with customized user experiences for enforced governance and approvals.

Seamlessly integrate and orchestrate your data sources

Real-time updates to data and processes

Create unique user experiences with Bizagi Apps

Intelligent data management

Bizagi's AI capabilities help you to manage your data properly. To eliminate the chance of errors, Bizagi can ask users for clarification on data. For example, if there is more than one way to interpret your data, Bizagi will confirm with

the user that it's using the correct data source before replicating it across all your systems. This helps to maintain an accurate, single source of truth, and Bizagi can then use this intelligence to make informed decisions in future scenarios.

Bizagi has transformed MDM operations for organizations worldwide.
